

Energy Policy

3Way specialises in the provision of cleaning and other support services.

It is 3Way's Policy to ensure that the use of energy that is within their control is managed effectively via a systematic approach which leads to improvement in energy performance, energy efficiency, energy use and consumption.

To achieve this 3Way supports a fully integrated Management System. This is registered with an accredited third-party certification body that carries out regular independent audits in addition to its own internal systems of monitoring.

The Directors of 3Way are fully committed to the energy management system and the continual improvement in energy performance.

It is the overriding policy of the company to

- ensure the availability of information and necessary resources to achieve energy performance objectives and targets.
- Comply with all applicable legal requirements and any other specific requirements that the company subscribes to related to energy use and performance.
- Where applicable and justifiable, purchase energy-efficient products and services and design for energy performance improvements.

Energy performance objectives are established to support our energy management system. These are established and reviewed by the directors as part of the management review process.

The Managing Director ensures that this policy is communicated, understood, and implemented at all levels in the organization.
